Elden Ring (Latest)

(tl;dr: Great game. Never finished.) There's no reason not to love Eternal Daughter. It's a fantastic piece of art. It's also a brilliant piece of game design that I can't recommend highly enough. Let's start with some words I wrote to explain why you might buy Eternal Daughter instead of the game I've currently listed. It's an RPG, but not necessarily an RPG, in the sense of things like Diablo or, I don't know, Final Fantasy. The game's narrative is focused on you and your development as a character, your agency as an individual, rather than on a quest with many other possible outcomes. The focus is on you. It's a fantasy RPG, yes, but it's also a game with dozens and dozens of sidequests and optional content. It's a game with a grand and fascinating story, both as an overarching tale and as an intricate tale for you to discover for yourself. It's a bit of a mix between roleplaying and action RPG. You talk with NPCs, but you don't actually select dialogue responses. Instead, you click buttons to make your choices. You use your

mouse to find items in a field of chests, but you don't actually click on them. You don't even have to use them. They appear after a few seconds. You find combat through exploration. Monsters are found by exploring levels and traversing them. There's really no combat to speak of. You just click around, searching through the houses you stumble upon and killing the monsters that get in your way. At first the combat is scary, but after a few hours in, I didn't really find any combat interesting. The combat isn't complicated or anything, just boring. Nothing happens. I was just clicking around, finding things, and killing everything in sight. It's a game where you can really play how you want to play. It's flexible and open enough that you can easily find your own way through it. It's different in the way it chooses to let you play. You don't, generally, do anything to experience the world. Instead, you sort of wade through it. You stumble through it, finding all sorts of things on your journey. There are a couple of themes you'll encounter. You'll spend most of your time in the old world of the kingdom of Tarnished, but you'll also travel to surrounding towns, as well as visit the sprawling city of Eld

Decadence is a online game developed by Vivendi and GT Interactive (Issue with index.html sent by express I am just developing a very small node application, but I am running into a problem. I am using express to send my index.html which has a form with some inputs. After submitting the form, I am redirecting the browser to /redirect.html. In my index.html, there is a form which looks like this: When the form is submitted, it should print the content of the form in /redirect.html. But I think I am doing something terribly wrong with the routing. This is what my app.js looks like:

```
var app = require('express')(); var http = require('http').Server(app); var path = require('path'); app.use('/', function (req, res) {
```
